CORE Datum Edging

Product Guide The Solution for Heavy Duty Edging

DESCRIPTION:

Core Datum Edge is a heavy-duty edging solution, created for the commercial market but equally appreciated by Landscapers and gardening enthusiasts alike!

Core Datum Edge provides a robust, clean and efficient way to create a seamless edge to driveways, paths or borders. All of the fixing points are concealed, ensuring a neat, uninterrupted finish.

Thanks to the patented DatumLock™ locking system, which not only provides design flexibility but also enables precise height adjustments of the edging. This is a particularly useful feature especially when maintaining a specific level, for example with a path or driveway.

With Core Datum Edge, all desired shapes can be created. Both straight lines and curved forms can be easily achieved, and the system also allows for the creation of angles. Additionally, the long, strong anchoring pins ensure that the edging is firmly anchored in the ground, even in challenging soil conditions.

TECHNICAL SPECIFICATION:

- + FINISH: galvanized steel, mild steel and corten steel
- + HEIGHT: 150 mm
- + LENGTH: 2200 mm
- + THICKNESS: 3 mm
- + WEIGHT: 10 kg/piece
